Executive Summary

The Retail Sales Analytics project was developed to analyze sales performance, profitability, customer behavior, and product performance using SQL, Python, and Power BI.

The analysis identified key revenue-driving categories, high-performing regions, profitable customer segments, and products

Key Findings

- West Region generated the highest overall sales revenue.
- Technology category delivered the strongest sales performance.
- Consumer Segment contributed the highest share of total sales.
- Several high-discount products showed reduced profitability.
- A limited number of products generated a major share of revenue.
- Monthly sales trends revealed seasonal fluctuations and peak sales periods.

Business Recommendations

1. Increase inventory levels for top-performing products to prevent stock shortages.
2. Focus marketing campaigns on high-value customer segments.
3. Optimize discount strategies to improve overall profit margins.
4. Prioritize high-performing categories while improving low-profit

Category Contribution to Revenue
